

Marketing Funnel & Conversion Performance Analysis Report

1. Objective

The objective of this project was to analyze marketing campaign data to evaluate conversion performance, identify customer drop-off points, and provide actionable recommendations to improve marketing effectiveness. The analysis focuses on understanding customer behavior from initial contact to successful conversion (deposit subscription).

2. Dataset Overview

Dataset: Bank Marketing Dataset (Kaggle)

The dataset contains customer demographic information, marketing campaign details, and the final campaign outcome.

Key Attributes

- Customer Age
 - Job
 - Marital Status
 - Education
 - Contact Method
 - Campaign Contacts
 - Previous Campaign Outcome
 - Deposit Status (Yes/No)
-

3. Dashboard KPIs

KPI	Value
Total Leads	11K
Total Conversions	5K
Total Non-Conversions	6K
Conversion Rate	47.38%
Average Campaign Contacts	2.51
Average Balance	2K

4. Funnel Analysis

Since the dataset records the campaign outcome rather than every intermediate stage of a digital marketing funnel, the analysis treats:

Customers Contacted

Converted Customers (Deposit = Yes)

Conversion Rate

- **Total Leads:** 11K
 - **Successful Conversions:** 5K
 - **Conversion Rate:** 47.38%
-

5. Key Drop-off Insights

Contact Method

- Cellular contact generated more successful conversions than telephone.
- Telephone contact resulted in comparatively fewer successful conversions.

Previous Campaign Outcome

- Customers with successful previous campaign outcomes showed higher conversion rates.
- A large number of customers had an unknown previous outcome, indicating an opportunity to improve customer history tracking.

Occupation

- Management, blue-collar, and technician customer groups contributed significantly to overall conversions.
- Conversion performance varied across occupations, suggesting the need for targeted marketing.

Monthly Performance

- Campaign performance changed across different months, indicating possible seasonal variations in customer response.

Education

- Customers with secondary education represented the largest segment of the dataset, followed by tertiary and primary education.
-

6. Actionable Recommendations

- Prioritize **cellular communication**, as it demonstrated stronger conversion performance.
- Develop targeted campaigns for occupations with higher conversion potential.
- Use insights from previous successful campaigns to personalize future marketing efforts.
- Optimize campaign timing by focusing on months with stronger conversion trends.
- Reduce unnecessary repeat contacts and focus on improving lead quality.
- Improve customer segmentation using demographic characteristics such as education and occupation.

7. Conclusion

This analysis provides valuable insights into customer conversion behavior and campaign effectiveness. By identifying high-performing contact methods, customer segments, and campaign patterns, organizations can optimize their marketing strategies, improve conversion rates, and enhance overall campaign performance. The dashboard offers an interactive way for stakeholders to monitor key performance indicators and make data-driven decisions.
